

Uninterruptible power supply backup life

Overview

The heart of any UPS system, batteries are electrochemical energy storage devices that convert chemical energy into the electrical energy that the UPS relies on to operate during a power loss. Because their chemicals naturally deplete over time, even UPS batteries that are well cared for. Fans are located throughout uninterruptible power supplies and play an important role in cooling critical electronic components such as the inverter and rectifier. In general. With proper servicing, a UPS can operate safely and reliably for more than a decade. Routine preventive maintenance has been proven to be among the leading factors of UPS system. A UPS is comprised of dozens of capacitors in a variety of sizes. Responsible for smoothing and filtering voltage fluctuations, UPS capacitors contain a pair of. Even UPSs that have been impeccably maintained and serviced will eventually reach the end of their useful life. Because the decision to replace a UPS can be complicated — and.
